

## CLAIMS

### I claim:

1. A computer box filter system, comprising:

a. a computer box with side air vents formed thereon;

b. a frame assembly including at least one, hollow side member with a longitudinally aligned center space, said center space being disposed over said side air vents, said side member have a plurality of inlet holes enabling air to enter said longitudinally aligned center space and transmitted to said side air vent holes in said compute box, said side member including a front surface and a outside surface;

c. an attachment means on said frame assembly enabling said frame assembly to be properly aligned to said computer box;

d. a filter placed inside said center space on said side member used to purify air as it travels through said side member.

2. A computer box filter cover as recited in Claim 1, wherein said frame assembly includes top member and two side members connected together to form an inverted, u-shaped structure capable of being slidingly attached to a computer box.

3. A computer box filter cover as recited in Claim 2, further including an abutment means attached to said frame assembly capable of being pressed against the front surface of a computer box when said frame assembly is placed over the computer box, said abutment

1 means capable of preventing rearward movement of said frame assembly over the computer  
2 box during use.

3  
4 4. A computer box filter cover, as recited in Claim 3 wherein said abutment means is  
5 a lower transversely aligned member covering a portion of the front surface of said  
6 computer box.

7  
8 5. The computer box filter system, as recited in Claim 1, further including a  
9 plurality of air inlet holes formed on said front surface of said side member.

10  
11 6. The computer box filter cover, as recited in Claim 5, wherein said door cover is  
12 pivotally attached to said frame assembly.

13  
14 7. A computer box filter cover, as recited in Claim 4 wherein said door cover  
15 is pivotally attached to said frame assembly.

16  
17 8. The computer box filter system, as recited in Claim 1, further including a plurality  
18 of air let holes formed on said outside surface of said side member.

19  
20 9. A computer box filter cover, as recited in Claim 4 wherein said door cover is  
21 pivotally attached to said frame assembly.

1           10.    A computer box filter cover, as recited in Claim 4 wherein said door cover  
2 is pivotally attached to said frame assembly.
